## Customer Reviews

New York author/plenary advisor William Blackburn graduated from college in 2003 and sums up his persona in his brief (and not too informative bio): "He does odd jobs and lives a minimalist lifestyle to support himself. Instead of complaining about how unfair the world is, he takes action and writes self-help books. He is very passionate about writing, arts and crafts, traveling, and has always felt the need to learn and teach others. William dedicates his free time to writing these books and traveling the world. His other books are Tiny Houses, How To Earn Money Fast, Crochet, and Crochet Jewelry. All of William's short self help books are practical " he gets right down to his topic at hand and doesn't waste words but instead gives succinct instruction on how to follow the concept he is supporting. In this book that concept is growing perennial vegetable in our home garden. As he states, "Perennial vegetables such as asparagus and Jerusalem artichoke are wonderful additions to any vegetable garden. However, for them to thrive, they need to be planted into a garden that will be a welcoming environment for them. A nice sunny spot with good soil is ideal. However, some perennial vegetables will do well even in less than perfect settings, and others prefer moist soils or partially shaded conditions. However, in order to grow their biggest and strongest, perennial vegetables will need adequate sunlight. Most of them will do best in full sun. Too little sun will cause the vegetables to be small and spindly. Perennial vegetables will also need plenty of water. Many of them will grow a large root system in order to be able to store energy to survive through the winter and will also grow lots of leaves that wick a lot of water out of the plant.
